

35) Check If a String Is a Valid Sequence from Root to Leaves Path in a Binary Tree Given a binary tree where each path going from the root to any leaf form a valid sequence, check if a given string is a valid sequence in such binary tree. We get the given string from the concatenation of an array of integers arr and the concatenation of all values of the nodes along a path results in a sequence in the given binary tree. Example 1: Input: root = [0,1,0,0,1,0,null,null,1,0,0], arr = [0,1,0,1] Output: true Explanation: The path 0 -> 1 -> 0 -> 1 is a valid sequence (green color in the figure). Other valid sequences are: 0 -> 1 -> 1 -> 0 0 -> 0 -> 0

CODE:

```
class Node:
    def __init__(self, val):
        self.val = val
        self.left = None
        self.right = None
    def exist_path(root):
        if root is None:
            return False
        if root.left is None and root.right is None:
            return root.val
        return False
    root = Node(5)
    root.left = Node(2)
    root.right = Node(7)
    root.left.left = Node(1)
    root.left.right = Node(4)
    root.right.left = Node(6)
    root.right.right = Node(8)
    if exist_path(root):
        print("Path exists")
    else:
        print("Path does not exist")
```

OUTPUT:

TIME COMPLEXITY : $O(n)$
